Knowledge Check: Managing Your Billing Account

Your score: 100% Passing score: 80%

Retake

Congratulations! You passed this assessment.

- ✓ 1. It is recommended that you set up only one Billing Account for your organization. In which two cases might you need more than one Billing Account? Select the two correct answers.

✓ ☒ To split GCP charges for legal or accounting reasons.

That's correct! Splitting charges for legal reasons or if you're using multiple currencies are a couple reasons you might choose to have more than one billing account.

☐ To separate costs by resource type.

✓ ☒ To pay invoices in multiple currencies.

That's correct! Splitting charges for legal reasons or if you're using multiple currencies are a couple reasons you might choose to have more than one billing account.

☐ To separate costs by project type.

☐ To match your organization's team structure.

- ✓ 2. Billing Account Users can see budget spend, unlink projects, and enable billing export.

☐ True

✓ ☒ False

That's correct! Billing account users can view budget spend, where applicable, and link projects to Billing Accounts, but only a Billing Account Admin can unlink projects associated to a Billing Account and enable billing export.

- ✓ 3. In the context of an Enterprise company, resources should be managed under which top-level node in the resource hierarchy? Select the correct answer.

☐ Payments profile

☐ Folders

☐ Buckets

✓ ☒ Organization

That's correct! Once a Billing Account is set up for an organization, resources should be managed centrally at the Organization level.

- ✓ 4. Once a Billing Account is created for an organization, when a user creates a project, ownership of the project is automatically assigned to the individual user.

☐ True

✓ ☒ False

That's correct! Projects default to an Organization to allow for central management of resources.

- ✓ 5. Where can you find the breakdown of your GCP costs by project, product, and SKU with forecasted costs and a trend line in one place? Select the correct answer.

☐ Online Summary statement

✓ ☒ Billing reports in the GCP Console

☐ Within the billing account.

☐ In your invoice.

That's correct! Refer to the Billing reports in the GCP Console when you need more information about your costs.

- ✓ 6. What is the function of the Payments Profile? Select the correct answer.

- ☒ A Google-level resource that sits outside of Google Cloud, linked to the Billing Account, and used to manage payment details for several Google Enterprise services.
- ☐ A GCP-level resource that sits within a Domain and is linked to the Billing Account.
- ☐ Used by Billing Account Admins to make monthly payments to Google.
- ☐ To store the monthly invoices.

That's correct! It sits outside of your Google Cloud environment and is linked to the Billing Account.

- ✓ 7. To ensure a reasonable level of redundancy for your billing account, which best practices should you consider following? Select the two correct answers.

- ✓ Grant Billing Admin roles to a Google group or, at a minimum, to two individual Billing Account Admins.

That's correct! Ensure that you have a minimum of 2 active Billing Account Admins at all times assigned individually or as part of a Google group.

- ✓ Regularly check that there are at least 2 active Billing Account Admins assigned to a Billing Account.

That's correct! Ensure that you have a minimum of 2 active Billing Account Admins at all times assigned individually or as part of a Google group.

☐ Choose multiple currencies for your billing account.

☐ Back up or archive past invoice files.

- ✓ 8. To ensure that Billing Account Admins have access to all of your organization's billing data in the future for performing deeper data analysis, what task must they complete immediately after setting up a billing account? Select the correct answer.

✓ ☒ Enable BigQuery export

☐ Hire a Financial Analyst

☐ Download a CSV file daily

☐ Set billing data permissions

That's correct! Enabling BigQuery export is an important step to do upfront because the export data is not retroactive.

- ✓ 9. In the context of Google Cloud Platform, which of the following best describes a resource? Select the correct answer.

☐ Individual users assigned to a project.

☐ Budget you'd need to pay for services consumed.

✓ ☒ Any Google Cloud Platform service, such as Compute Engine or BigQuery.

☐ Analytics capabilities for sorting through large volumes of data.

That's correct! A resource is any GCP service.

✓ 10. How many currencies can a single Billing Account be associated with? Select the correct answer.

✓ 1

☐ 2

☐ as many as needed

☐ up to 5

That's correct! Each Billing Account uses a single currency.
